DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2645

4. Claim(s) 1-10, 12-22, 24 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gandhi et al. (US 2004/0015351 A1) in view of Stuart et al. (US 6,868,154 B1).

Regarding **claim(s) 1, 18 and 19**, Gandhi discloses a method for validating a textual entry of spoken words of a caller (FIG. 5 and paragraph 0002), comprising:

monitoring a textual entry of the spoken words (FIG. 5 and paragraph 0040) [The test personnel can listen to the audio segments and manually transcribe the user spoken utterances and includes the text with the information extracted, thereby monitoring a textual entry of the spoken words];

converting the spoken words to text using a speech recognition technique (FIG. 5 and paragraph 0040) [The speech engine process the audio segments to determine the recognized text, thereby converting the spoken words to text using a speech recognition technique].

Gandhi discloses the speech recognition system manages telephone calls from the users (paragraph 0024) but fails to disclose a system that receives a telephone call from the caller and comparing the textual entry to the converted text to confirm an accuracy of the textual entry substantially during said telephone call.

However, Stuart in the same field of endeavor teaches a method that receives a telephone call from the caller (column 9, lines 55-59); and

Application/Control Number: 10/602,168

Art Unit: 2645

comparing the textual entry to the converted text to confirm an accuracy of the textual entry substantially during said telephone call (column 9, line 55 to column 10, line 20).

Therefore, it would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify the speech recognition system of Gandhi using the teaching of a speech recognition applied during a phone call as taught by Stuart.

This modification of the invention enables the system to receive telephone calls as commands so that the system would provide useful information based on the state of the interaction of the caller and the agent.

Regarding **claim(s) 2**, Gandhi as modified discloses a method for validating a textual entry of spoken words of a caller, further comprising the step of recording the spoken words (FIG. 2 and paragraph 0029) [The speech recognition system 205 records the actual user speech and stores it within the audio data store 225].

Regarding **claim(s)** 3, Gandhi as modified discloses a method for validating a textual entry of spoken words of a caller, further comprising the step of time-stamping the recording (FIG. 5 and paragraph 0039) [The transaction logs stores information such as the date and time information of the recording].

Regarding claim(s) 4, 13 and 20, Stuart teaches the step of constraining the comparing step to a recent audio stream (column 9, lines 55-59).

Application/Control Number: 10/602,168

Art Unit: 2645

Regarding **claim(s)** 5, Stuart teaches the step of constraining the comparing step to a recent audio stream corresponding to a completed field in a user interface (column 9, lines 55-59).

Regarding **claim(s)** 6, Stuart teaches the step of constraining the comparing step to a recent audio stream since a previous field was completed (column 9, lines 55-59).

Regarding **claim(s) 7**, Gandhi as modified discloses a method for validating a textual entry of spoken words of a caller, further comprising the step of notifying an agency of an error (FIG. 6-9 and paragraph 0046) [The transaction selection GUI 700 is presented to the test personnel for error and manual verification process by play the audio segment].

Regarding **claim(s) 8**, Gandhi as modified discloses a method for validating a textual entry of spoken words of a caller, further comprising the step of correcting a detected error (FIG. 6-9 and paragraph 0046) [The test personnel can correct errors found in the transcribed text by listen to the spoken words].

Regarding **claim(s) 9**, Gandhi as modified discloses a method for validating a textual entry of spoken words of a caller, further comprising the step of suggesting at least one alternative for a detected error (FIG. 5 and paragraph 0040) [The test personnel listen to the spoken words as an alternative to the detected error].

Art Unit: 2645

Regarding **claim(s) 10**, Gandhi as modified discloses a method for validating a textual entry of spoken words of a caller, further comprising the step of selecting the speech recognition technique based on properties of the spoken words (FIG. 5 and paragraph 0040 and 0041) [The test personnel based on conditions of the recognition results that the speech recognition system may not be able to detect therefore transcribe the user spoken utterance to text, thereby selecting the speech recognition technique based on properties of the spoken words].

Regarding claim(s) 12, Gandhi in combination with Stuart disclose all the limitation of claim(s) 12 as stated in claim(s) 1's rejection and furthermore Gandhi discloses a memory (FIG. 2 and paragraph 0029); and

at least one processor (230 on FIG. 2, coupled to the memory (FIG. 2 and paragraph 0032) [The statistical processor 230 can access the data store 220].

Regarding **claim(s) 14**, Gandhi as modified discloses an apparatus for validating a textual entry of spoken words of a caller, wherein the processor is further configured to notify an agent of an error (FIG. 6-9 and paragraph 0046) [The transaction selection GUI 700 is presented to the test personnel for error and manual verification process by play the audio segment].

Regarding **claim(s) 15**, Gandhi as modified discloses an apparatus for validating a textual entry of spoken words of a caller, wherein the processor is further configured

Art Unit: 2645

to correct a detected error (FIG. 6-9 and paragraph 0046) [The test personnel can correct errors found in the transcribed text by listen to the spoken words].

Regarding **claim(s) 16**, Gandhi as modified discloses an apparatus for validating a textual entry of spoken words of a caller, wherein the processor is further configured to suggest at least one alternative for a detected error (FIG. 5 and paragraph 0040) [The test personnel listen to the spoken words as an alternative to the detected error].

Regarding **claim(s)** 17, Gandhi as modified discloses an apparatus for validating a textual entry of spoken words of a caller, wherein the processor is further configured to select the speech recognition technique based on properties of the spoken words (FIG. 5 and paragraph 0040 and 0041) [The test personnel based on conditions of the recognition results that the speech recognition system may not be able to detect therefore transcribe the user spoken utterance to text, thereby selecting the speech recognition technique based on properties of the spoken words].

Regarding **claim(s) 21**, Stuart teaches a method for validating a spoken delivery of a textual script further comprising the step of notifying an agent of an error (column 9, lines 27-40).

Regarding **claim(s)** 22, Gandhi as modified discloses the step of selecting the speech recognition technique based on properties of the textual script (FIG. 5 and paragraph 0040 and 0041) [The test personnel based on conditions of the recognition results that the speech recognition system may not be able to detect therefore transcribe the user spoken utterance to text, thereby selecting the speech recognition technique based on properties of the textual script].

Regarding **claim(s) 24 and 25**, Stuart teaches a method, wherein said converting step employs a field specific speech grammar for validating a spoken delivery of a textual script further comprising the step of notifying an agent of an error (column 9, lines 27-40).

5. Claim(s) 11 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gandhi in view of Stuart as applied to claim(s) 1 and 19 above, and further in view of Epstein (US 6,754,626 B2).

Regarding claim(s) 11, Gandhi in combination with Stuart as applied to claim(s) 1 above differ from claim(s) 11 in that it fails to disclose the accuracy is confirmed by comparing a confidence score to a threshold value.

However, Epstein, in the same field of endeavor, teaches a method for validating a textual entry of spoken words of a caller, wherein the accuracy is confirmed by

Art Unit: 2645

comparing a confidence score to a threshold value (FIG. 6 and column 13, lines 5-17)
[The speech recognition system can identify text with a confidence score above a predetermined minimum threshold value].

Therefore, it would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify the speech recognition system of Gandhi as modified using the recognition system as taught by Epstein.

This modification of the invention enables the system to generate a confidence score to a threshold value so that the system would identify one contextual model producing text.

Regarding **claim(s)** 23, Epstein in the same field of endeavor teaches a method for validating a spoken delivery of a textual script, wherein the accuracy is confirmed by comparing a confidence score to a threshold value (FIG. 6 and column 13, lines 5-17) [The speech recognition system can identify text with a confidence score above a predetermined minimum threshold value].

Response to Arguments

6. Applicant's arguments with respect to **claim(s) 1-25** have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2645

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gerald Gauthier whose telephone number is (571) 272-7539. The examiner can normally be reached on 8:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Fan Tsang can be reached on (571) 272-7547. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
